Project Title : Student Hostel Record

Professor : Dr.P.S.V.Sai Prasad Sir

Project Description : we are creating a student hostel record website in which it contains all the info of student including his name , reg no , course ,his room number ,mess card number etc.

Post and Get : in this warden has the access to insert the **new** information about student and student can also access his information.

Detailed Description

In this project we are created **5 web pages** and one file creating table in database in which

First page consist of two options one is **Student**

And next one is **Administrative**. When we click on student it opens **Student** page similarly when you click on **Administrative** it opens admin page.

In **Administrative** page we have another two options one is **Submit** and **Get** information. When we click on **Submit** it opens new page where one form is present to fill details. After entering all details of student click on submit after successful submission in bottom it shows data inserted successfully. From then if we want to come back to previous page we have back button at left-top corner or you can submit another student details.

When we click on **Get** studentdetails option it open new page which consist of one colon in which one should give reg id to get details. After entering number on clicking enter we direct to new page where we get the details of student. From then if we want to come back to previous page we have back button at left-top corner.
